# The do's and don'ts 2 Preparation and planning for the installation 3 Installation 4-7 Finalise 8

# Important safety information

# DO

- ✓ READ THROUGH THE INSTRUCTIONS BEFORE BEGINNING WORK
- ✓ USE FLEXIBLE ADHESIVES AND GROUT
- ✓ TEST THE CABLE MAT AND FLOOR PROBE BEFORE
  TILING
- ✓ BE CAREFUL NOT TO DAMAGE OR DISLODGE THE CABLE MAT DURING SCREEDING
- ✓ WAIT AT LEAST 7 DAYS BEFORE TURNING THE SYSTEM ON
- ✓ READ THE SEPARATE INSTALLATION AND OPERATING INSTRUCTIONS FOR THE THERMOSTAT
- ✓ ENSURE THE JOINT BETWEEN THE COLD CABLE AND HEATER CABLE IS BENEATH THE SCREED
- ▼ TAKE A PHOTOGRAPH OF THE FLOOR HEATING MATS OR DRAW A PLAN BEFORE THE SCREED IS APPLIED FOR FUTURE REFERENCE AND WARRANTY REGISTRATION
- ✓ KEEP CABLE MONITORING ALARM CONNECTED
  AND TURNED ON DURING THE SCREEDING AND
  TILING PROCESS AND WHEN ANY TRADES ARE
  WORKING IN THE ROOM

# **DO NOT**

- ATTEMPT TO CUT THE HEATER CABLE AT ANY TIME
- ALLOW THE WIRES TO CROSS OR TOUCH
- ALLOW EXCESSIVE FOOT TRAFFIC OVER THE MATS BEFORE SCREEDING
- CUT TILES DIRECTLY OVER THE MATS
- PLACE TOOLS OR STACKS OF TILES ON TOP OF THE CABLE

# Preparation and planning for the installation

# Before you begin installing read through these instructions carefully and check that you have all the components required.

The system is designed for installation below tiles, stone or marble flooring.

#### Contents of heating kit

- · Twin-core heating cable on mesh mat
- Digital thermostat and separate floor sensor
- Fixing tape
- Monitoring alarm

#### **Installation notes:**

- The system requires a 230/240v mains voltage and must be connected by a licensed electrician.
- The system is intended for heating tiled or stone floors and the mat output/wattage is given on the box and label.
- The 'cold' cable connected to the mat is double insulated and the first outer sheath (coloured black) carries an earth screen (the silver coloured braid). The cable also contains a built in return, meaning that the cable only has to be connected to the thermostat from one end. Inside the outer sheath there are 2 wires, these are the live (brown) and neutral (blue).
- For larger areas, if two or more mats are used, these can usually be connected together at the thermostat or by using a small blank-fronted connection box (to a maximum of 16 amps).
- The system is suitable for installing on any subfloor which is sound and suitable for tiling; in the main this will be concrete, cement sheet or tilebacker boards. Some water resistant composite boards may also be suitable but it is not recommended to tile directly onto hardboard, MDF or standard grade chipboard as these materials absorb moisture and subsequent swelling could cause tiles to crack or dislodge.

#### **Electrical Provisions:**

Before starting the installation you should make provision for the electrical connections.

When planning the installation you should always consult with your electrician concerning your requirements.

**Note:** for bathrooms and wet areas the position of the thermostat must be considered and be in accordance with current AS/NZS wiring regulations. Consult a licensed electrician for advice.

The heater cable **MUST NOT** be cut or cross at any point - only the black 'cold' cable and the probe can be cut or lengthened.

The joint between the heater cable and the black 'cold' cable **MUST** be located under the final floor covering.

For larger areas a separate circuit will be required - always consult your electrician concerning your individual requirements.

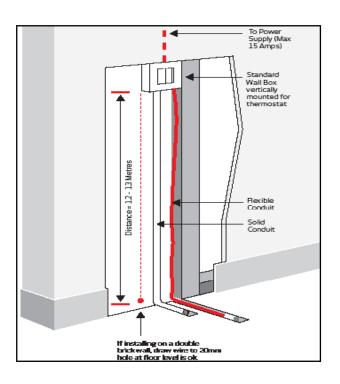

The thermostat has a rating of **16amps** - loads in excess of 16 amps (3.45kw approx) will either require further thermostats or need to be connected via a suitable contactor - consult your electrician on this.

# Installation

# **Preparation**

#### **Electrical provision**

Prior to installing the heating mat, your electrician should make the provision for the thermostat and floor sensor as per the drawing below.

# Installation

# Step 1

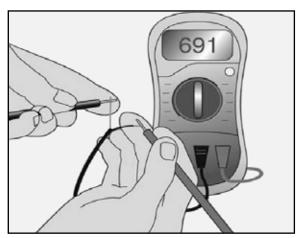

First prepare the sub-floor, sweeping up any dirt, dust and debris and ensure that the floor is free from grease.

**Note:** If your sub-floor has already been waterproofed you may lay the cable mat directly over the waterproofing, provided it is completely dry. If the floor surface is dusty and porous it is recommended to prime the floor with a floor primer to aid adhesion of the mat and fixing tape.

# Step 2

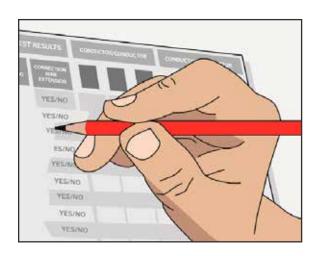

Test the resistance of the cable on the mat using a multi-meter prior to unrolling to ensure that the reading corresponds to the manufacturer's resistance reading. This can be found on the label on the packaging or printed on the PVC sheath (±10%). Make a note of the reading on the warranty form.

**DO NOT** screed over the cable without first testing it.

#### **Resistance test**

Each test has three parts: Live and neutral. Live and earth. Neutral and earth.

#### **Record results**

Write each resistance value on the warranty form to ensure your warranty is valid.

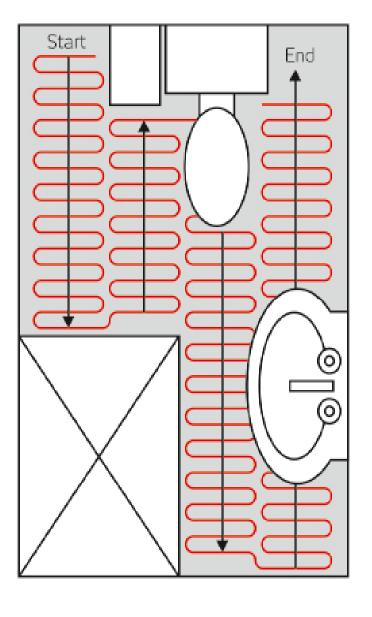

FAILURE TO FOLLOW THESE INSTRUCTIONS WILL INVALIDATE THE WARRANTY. PLEASE READ THE INSTALLATION GUIDE CAREFULLY.

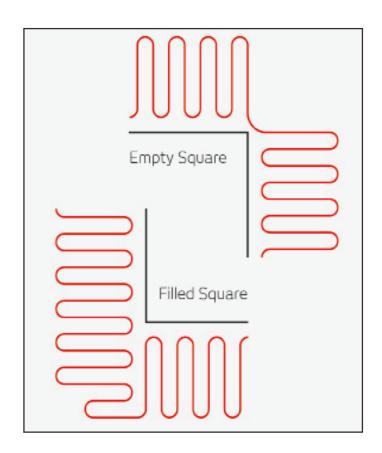

# **Installation - continued**

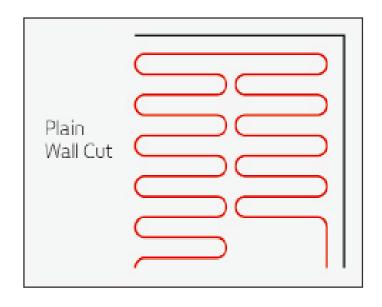

# Step 3

Plan the mat layout. This is a vital step and MUST be done correctly to ensure that all the mat is used up. Once the mat has been unrolled and cut it cannot be returned.

Measure the area to be heated in m<sup>2</sup>. Do not include areas taken up by fixed objects such as baths, showers and kitchen units. If the calculated heated area is smaller than the chosen mat size **STOP** and return and exchange for the correct mat size. You should mark out the layout plan on a drawing - see examples.

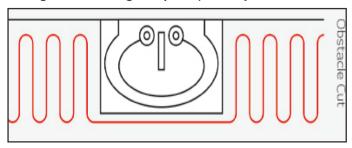

FAILURE TO FOLLOW THESE INSTRUCTIONS WILL INVALIDATE THE WARRANTY. PLEASE READ THE INSTALLATION GUIDE CAREFULLY.

# **Installation - continued**

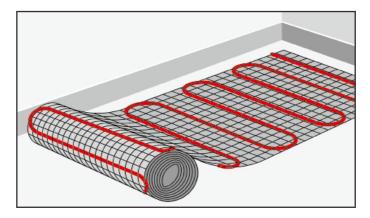

# **Note: Irregular areas**

Cut the mesh - taking care not to cut the heater cable - and pull the heater cable off to allow for fitting around irregularly shaped objects.

#### Step 4

Only when you have calculated that the mat will fit into the room should you begin to lay. Beginning at the corner closest to where the thermostat is located, position the mat ready to start rolling out.

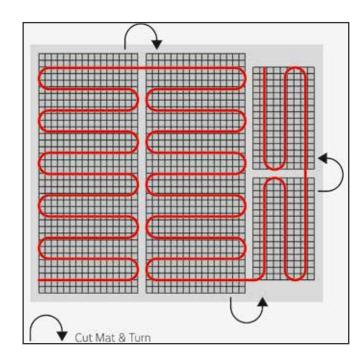

**Important:** Before rolling out, check that the black 'cold' lead will reach the location of the thermostat. If it does not you should either change the starting point or remove some of the cable from the starting end of the mat and run this along the edge of the room to allow the 'cold' cable to reach the thermostat. The joint between the black 'cold' cable and the heater cable **must be** located under the final floor covering.

# Step 5

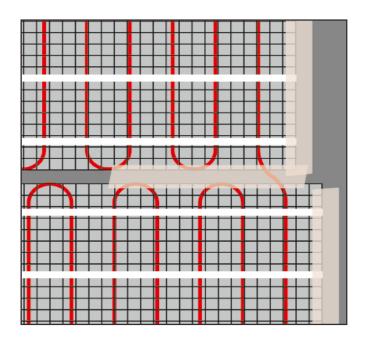

From the starting point, begin rolling out the mat.

When you have done one full run and reach the opposite corner of the room cut through the mesh. **DO NOT CUT THROUGH THE CABLE**. Turn the mat through 180° and roll the mat back the other way. Continue this process until all of the mat is used up. If you are using two or more mats, try to finish off at the opposite wall so that the second mat is easier to lay.

Once you are happy with the layout, tape down the mat along the edges to secure in place.

Note: If the mat has been laid on a dusty surface and tape will not adhere, we recommend that a thin layer of tile adhesive is applied to all of the ends of the mat and allowed to set to ensure that there is no movement of the mat during the screeding process.

FAILURE TO FOLLOW THESE INSTRUCTIONS WILL INVALIDATE THE WARRANTY. PLEASE READ THE INSTALLATION GUIDE CAREFULLY.

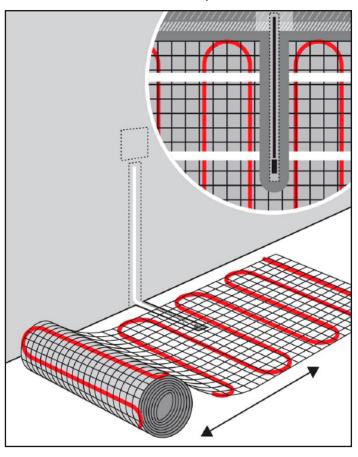

# **Installation - continued**

# Step 6

Test the resistance of the floor sensor. The resistance must measure between 8 to 12 K  $\Omega$ . Make a note of the reading and record this on the warranty form. Feed the sensor cable into the conduit supplied, ensuring it feeds through to the end of the conduit located in the floor. Position the sensor either between two runs of the mesh mat or between two loops of the heater cable. The sensor wire can be shortened or, if necessary, lengthened with 2 core flex cable. If you need to cut the sensor cable you must only cut the exposed cable end. **DO NOT** cut the end that contains the plastic floor sensor.

#### Position the floor sensor

Position the sensor either between two runs of the mesh mat or between two loops of the heater cable.

#### Step 7

Connect and switch on the cable alarm prior to screeding. The cable alarm must be turned on at all times when screeding or tiling or when any other trades are working in the room.

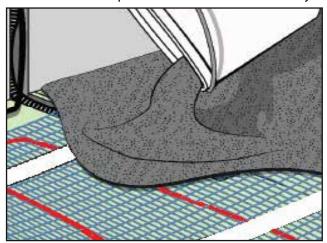

In the unlikely event of the alarm sounding, stop work immediately and locate the source of the damage. Contact Radiant Heating immediately for instructions on how to proceed.

# Step 8

You should now screed over the cable mat, taking care not to damage or dislodge the mat during this process.

When screeding over underfloor heating we recommend, where possible, using a slightly stronger screed mix than normal (1:3) as this will allow better heat penetration and conductivity.

FAILURE TO FOLLOW THESE INSTRUCTIONS WILL INVALIDATE THE WARRANTY. PLEASE READ THE INSTALLATION GUIDE CAREFULLY.

# **Finalise**

#### Connect the thermostat

The connection to the thermostat can now be made (see separate thermostat instructions). Final connection to the thermostat must be performed by a licensed electrician in accordance with AS/NZS 3000 Wiring Regulations.

**Do not** turn the system on until the floor covering has been laid and allowed time to set.

# Turning the heating system on

Once the floor covering has had time to set the system can be turned on.

**NOTE:** The heating system may be slow to react at first, especially if installed over a new screed floor or in a new building.

Start by setting the floor temperature to around 20 - 22 Deg C and build up by 1 degree per day until the desired temperature is reached.

See separate instructions for connection and operation of the digital thermostat.

# **Completing the warranty form**

Ensure that all of the resistance readings are entered on the warranty form. Ensure that photographs are taken of the layout of the mat prior to screeding. Complete the warranty form and return, along with photographs or diagrams, to Radiant Heating by post, email or using the online warranty registration form on our website www.radiantheating.com.au.
