

Rotational Pipe End Peeling Tool

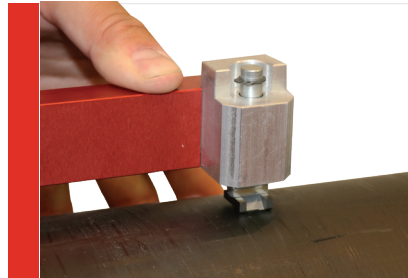

The Plasson Pipe End Peeler is the perfect tool for peeling pipes from DN63 – DN400. The engineered blade removes a consistent peel of oxidized pipe layer which is essential to a successful electrofusion weld.

Features

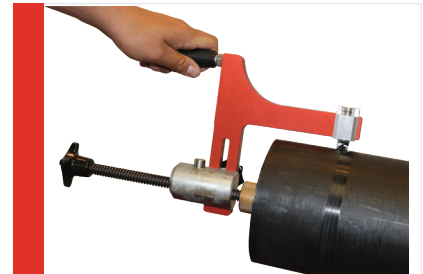

- ✓ Consistent and uniform peel of oxidized pipe layer depth due to engineered blades
- ✓ Allows for imperfections in the pipe due to spring loaded mechanism
- ✓ Faster and more efficient than hand scraping
- ✓ Ensures compliance with PIPA POP001 guideline

1. Insert the tensioning head into the pipe end and expand with the cross handle until it grips onto the pipe wall.

2. Adjust the scraper arm so that the indicator pin is flush with the upper end of the scraper blade holder.

3. Rotate the scraper arm clockwise to remove a uniform layer of oxidized pipe.
